CityMobil

Towards advanced transport for the urban environment

Deliverable no.	5.3.1b
Deliverable Title	Evaluation report for the ex-ante study
Dissemination level	Public
Work Package	5.3
Author(s)	Astrid Guehneemann, Marco Valerio Salucci, Daniele Stam
Co-author(s)	Paolo Delle Site, Adriano Alessandrini
File Name	CityMobil _D5.3.1b_ Annex4
Status (F: final, D: draft)	F
Project Start and End Date	01 May 2006 - 30 April 2011

Annex 4 MCA tables

1.1 Indicator Description as Provided by Models

Social indicators:

Accessibility indicators are measured as the number of workplaces which can be reached from a zone weighted by generalised costs. For the low-income non-car accessibility, this has been calculated for defined low-income zones based on public transport costs only.

The **accident** rate is speed dependent. It is assumed that dual mode vehicles don't have an influence on the accident rate.

Environmental indicators:

CO₂ related indicators are calculated well in to wheel while **NO_x and particle (PM₁₀)** emissions are calculated pump to wheel (PW).

The **land take** is an index of the development of the built-up area, measured at the level of zones.

Economic Indicators:

1.2 Model Results for MCA Indicators
